

Capability Statement

Large Scale Wind Turbines

Green Cat Renewables

An increasing number of rural businesses are starting to identify wind farming as a commercial opportunity. In good wind speed sites wind farming can be a very profitable addition to a rural business at the same time as improving the overall sustainability of the business and contributing to the nation's renewable energy targets.

Green Cat Renewables Ltd has considerable experience in supporting the development of small, independent commercial-scale wind projects.

Green Cat Renewables provide the full range of technical services required to deliver these projects economically. Our team of over 40 Environmental Consultants, Engineers and Legal Support spread across our three Scottish offices has successfully delivered 15 privately owned projects from initial feasibility to electricity generation. These projects range from single turbines to a 6.9MW projects and we are currently working around 100 more across Scotland.

- Site assessment and identification of showstoppers
- Project Feasibility
- Environmental Assessment
 - Landscape and Visual Assessment
 - Noise
 - Cultural Heritage
 - Hydrology
 - Shadow Flicker
- Planning Support
- Wind Resource Assessment
- Detailed Design
- Grid Connection Negotiation
- Project Management
- Construction Management
- Health and Safety
- Geotechnical Services
- Legal Services
- Due Diligence
